

## 5                   An Executable Application Access Management System

### Abstract Of The Disclosure

10           A system enables individual organizations of multiple different organizations to manage access of employees to a remotely located application hosted by an application service provider. The system includes a database and a command processor. The database contains data representing multiple user interface images and multiple executable procedures. The multiple user interface images are associated with corresponding multiple organizations. The multiple executable procedures are associated with corresponding multiple user interface images. An executable procedure supports a user of a particular organization in managing  
15   access of employees of the particular organization to an application hosted by an application service provider. The command processor employs the database for initiating execution of a particular executable procedure in response to a command initiated using a particular user interface image associated with the particular executable procedure and with the particular organization. The particular executable procedure supports the user in managing access of an  
20   employee of the particular organization to an application.
